Winding Line on a Halo Spool- Termination of line on Spool:

1) Start by forming Larkshead with large loop on end of line
Making sure that line is opposed at end of loop on Larkshead.

2) Place Loop around Halo Spool

3) Grab small loop which is tied on end of large loop

4) Pull line in direction to tighten the line around the spool.
If line loosens instead of tightening, then pull is other direction!

5) Pull until line is very secure on winder. You do not have to pull very hard. Just be sure that line to snug on winder.
NOTE: To remove line from winder, simply pull small loop in direction to loosen the line. If it seems to tighten, pull in opposite direction.
